Explorer → Strategist

Talk to AI. Make it remember.

Skeptic | **Explorer** | **Whisperer** | **Strategist** | Operator | Orchestrator | Builder

Two levels in one session

Today we change the words
AND the information

Open ChatGPT on your laptop

Pick a real task from your work

a proposal, an email, a summary, a plan

Or use: "Write me a proposal for improving our onboarding process"

Type your natural prompt

Don't overthink it

Assign a Role

One sentence changes everything

Write me a proposal for improving onboarding

You are a senior HR director at a mid-size tech company. Write me a proposal for improving onboarding

Add this to your prompt:

"You are a senior [your role] at [your company]."

Be Specific

Specificity in = specificity out

Write a proposal for improving onboarding

Write a 2-page proposal for the VP of People. We have 500 employees. Current onboarding: 4 weeks.

Add to your prompt:

WHO it's for

WHAT the constraints are

HOW long it should be

One Task at a Time

Structure in = structure out

Write a proposal, include metrics, add a timeline, and suggest a budget

1. Summarise the current problem
2. Propose a solution
3. Outline key metrics
4. Suggest a timeline

Structure your prompt:

Add numbered sections or clear steps

Power Keywords

Words that change AI behaviour

What do you think about our onboarding?

Be radically honest.
Think step by step.
Challenge my assumptions.

Add 2–3 power keywords:

"Be radically honest."

"Think step by step."

"Challenge my assumptions."

Define the Output

Tell AI exactly what you need

Write something about improving onboarding

Format: 2-page memo.
Tone: professional but direct.
Audience: VP of People.

Add to your prompt:

Format, tone, length, and audience

Same task. Same information.
Just better words.

We never changed what the AI knew

Add 3–4 sentences of real context:

Company size. Team. Constraints. What's been tried.

Brilliant.
Helpful.
Remembers nothing.

Add to your prompt:

"Before you start, ask me clarifying questions about anything you'd need to know."

Next conversation?
You'll type it all again.

Settings
Personalisation
Custom Instructions

Write your custom instruction:
"I work at [company]. My role is [role].
Format: [format]. Tone: [style].
Be radically honest. Challenge my assumptions."

You typed one sentence.
It already knew the rest.

Same task. Each one dramatically better.

Vague

Explorer

Well-prompted

Whisperer

Skill-enhanced

Strategist

Directions every trip

Effort. Every. Time.

GPS that remembers

Compounds permanently.

You're now a Strategist

But who's doing all the work? Still you.
