Strategist → Operator

Let AI work for you

Strategist → Operator

You talk to AI like a pro.
You've set up its playbook.
But who's doing all the work?

Still you.

1. You search

2. You paste

3. AI drafts

4. You apply

You’re using a Ferrari to carry groceries.

1. Agent retrieves

2. Agent identifies gaps

3. Agent creates

4. You review

Same colleague.
Now she has hands.

Eyes, a phone, and a to-do list.

YOUR TURN

Open Claude Code (or your agentic tool).

We’re going to give the agent
a task with a file to read.

YOUR TURN

Give the agent a task:

"Read [this document] and write
a one-paragraph summary
for a non-technical audience."

An agent is only as useful as what it can reach.

YOUR TURN

Give the agent a research task:

"Research [topic] and summarize
the top 3 findings with sources."

It found something you wouldn’t have thought to provide.

Trust, but verify.

YOUR TURN

Pick one claim from the agent's output. Verify it manually.

Is it accurate? Did anything
'feel right' but turn out wrong?

AI is a power tool, not autopilot.

You’re now an Operator.

You set up agents, connected them
to your world, and let them work.

One agent doing one task is powerful.
What if you had a whole team?

Next time: Operator → Orchestrator.
We chain agents together.
Each one focused. The team does everything.
