Operator → Orchestrator

Coordinate AI teams

Operator → Orchestrator

Last time: one agent doing everything. Today: a team.

One chef doing a 10-course dinner alone?

Burnout. Mistakes. Forgotten appetizer.

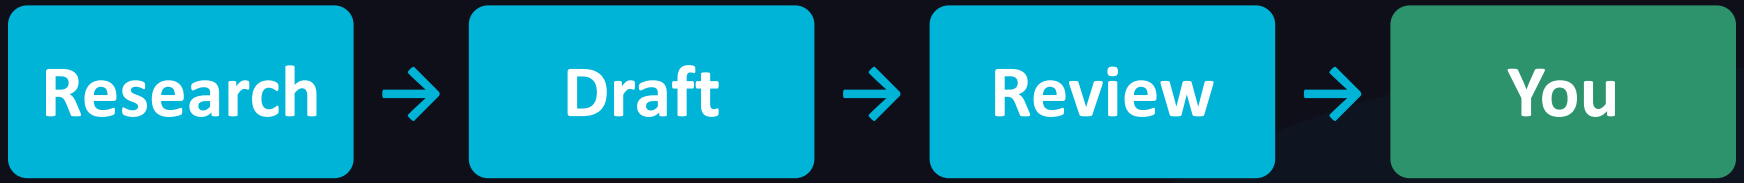
The trick isn’t making one AI smarter. It’s making many work together.

YOUR TURN

GROUP EXERCISE: Break a task into phases.

What are the steps? What does each step produce? What does the next step need from the previous one?

Each phase becomes one agent.
Each agent has one job.



Research
Draft
Review
You

Each agent does one thing.
The chain does everything.

DEMO

Watch a 3-phase chain run live.

YOUR TURN

Build a 2-phase chain.

Phase 1: Research / gather / summarize.
Save the output.
Phase 2: Feed Phase 1’s output
to a second agent to draft / create.

Skills

You already know these.
Now each agent gets its own.

YOUR TURN

Add a skill to one agent in your chain.

e.g. "When researching, structure output as: Key Finding, Source, Confidence Level."

Skills compound.
The brigade gets smarter every time.

1.5 hrs

of you being the bottleneck

Illustrative estimate

15 min

of judgment — the part only humans can do

Same proposal.
The chain gets smarter every time.

Your feedback becomes skills.
She won’t remember, but the skills will.

You’re now an Orchestrator.

Look how far you've come.

The secret was never in the AI.

Now go try it — one task, this week.
