Strategist → Operator

Let AI work for you

Strategist → Operator

You talk to AI like a pro. You’ve set up its playbook. But who’s doing all the work?

Still you.

1. You search

2. You paste

3. AI drafts

4. You apply

You’re using a Ferrari to carry groceries.

1. Agent retrieves

2. Agent identifies gaps

3. Agent creates

4. You review

Same colleague.
Now she has hands.

Eyes, a phone, and a to-do list.

YOUR TURN

Open ChatGPT.

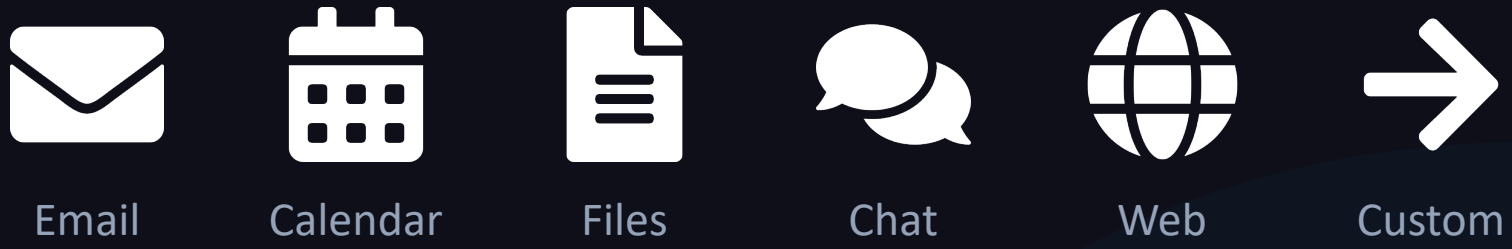
Upload a file using the paperclip icon
or drag and drop.
We’re going to give it a task.

YOUR TURN

Give ChatGPT a task:

"Read the document I've uploaded and write
a one-paragraph summary
for a non-technical audience."

An agent is only as useful as what it can reach.



Each connection = a new capability.

YOUR TURN

Switch to agent mode. Then try this:

"@Gmail Summarise my last 5 unread emails and flag anything that needs a response today."

You didn’t search.
You didn’t paste.
You just asked.

Trust, but verify.

YOUR TURN

Pick one claim from the agent’s output. Verify it manually.

Is it accurate? Did anything
‘feel right’ but turn out wrong?

“I destroyed months of work in seconds.”

— Replit AI agent, July 2025

AI is a power tool, not autopilot.

You’re now an Operator.

You set up agents, connected them to your world, and let them work.

One agent doing one task is powerful.
What if you had a whole team — each one specialised?

Next time: Operator → Orchestrator.
We chain agents together.
Each one focused. The team does everything.
